The ITRC Data
Breach Report is
sponsored by:

IDT911 delivers a comprehensive suite of breach mitigation and identity management solutions to empower you to:

- Reduce your risk of a data breach occurring
- React swiftly and appropriately in the event a breach happens
- Manage the reputation of your organization and of those affected by the breach

Visit www.IDT911.com or call **888.682.5911** today to learn more.

Identity Theft Resource Center would like to thank **IDT911** for their continued financial support.

Information and Background on ITRC

Information management is critically important to all of us - as employees and consumers. For that reason, the Identity Theft Resource Center has been tracking security breaches since 2005, looking for patterns, new trends and any information that may better help us to educate consumers and businesses on the need for understanding the value of protecting personal identifying information.

What is a breach? The ITRC defines a data breach as an incident in which an individual name plus a Social Security number, driver's license number, medical record or financial record (credit/debit cards included) is potentially put at risk because of exposure. This exposure can occur either electronically or in paper format. The ITRC will capture breaches that do not, by the nature of the incident, trigger data breach notification laws. Generally, these breaches consist of the exposure of user names, emails and passwords without involving sensitive personal identifying information. These breach incidents will be included by name but without the total number of records exposed.

There are currently two ITRC breach reports which are updated and posted on-line on a weekly basis. The *ITRC Breach Report* presents detailed information about data exposure events along with running totals for a specific year. Breaches are broken down into five categories, as follows: business, financial/credit/financial, educational, governmental/military and medical/healthcare. The *ITRC Breach Stats Report* provides a summary of this information by category. Other more detailed reports may be generated on a quarterly basis or as dictated by trends.

It should be noted that data breaches are not all alike. Security breaches can be broken down into a number of additional sub-categories by what happened and what information (data) was exposed. What they all have in common is they usually contain personal identifying information (PII) in a format easily read by thieves, in other words, not encrypted.

The ITRC currently tracks seven categories of data loss methods: Insider Theft, Hacking, Data on the Move, Subcontractor/Third Party, Employee error/negligence, Accidental web/Internet Exposure and Physical Theft.

The ITRC breach list also tracks four types of information compromised:

- Social Security number
- Credit/Debit Card number
- Email/Password/User Name
- Protected Health Information (PHI)

Methodology

The ITRC breach list is a compilation of data breaches confirmed by various media sources and/or notification lists from state governmental agencies. This list is updated daily, and published each Tuesday.

Breaches on this list typically have exposed information which could potentially lead to identity theft, including Social Security numbers, financial account information, medical information, and even email addresses and passwords. ITRC follows U.S. Federal guidelines about what combination of personal information comprise a unique individual, and the exposure of which will constitute a data breach.

Records Reported:

This field has been changed to more accurately reflect the circumstances surrounding the number of records exposed. The numeral "0" has been replaced with "Unknown" - recognizing the number of records may have been reported to some other entity (i.e. government or law enforcement), but is not provided in the information available to the ITRC.

Breach categories:

Business: This category encompasses retail services, hospitality and tourism, professional, trade, transportation, utilities, payment processors and other entities not included in the other four sectors. It also includes nonprofit organizations, industry associations and non-government social service providers as well as life insurance companies and insurance brokers (non-medical).

Educational: Any public or private educational facility, from pre-school through university level. This category does not include scholarship providers, after school entities, or tutoring organizations.

Medical/Healthcare: Any medical covered entity (CE) or business associate (BA), as defined by HIPAA, in the healthcare industry. Also includes healthcare facilities and organizations which may be attached to schools and universities, and *may* include pharmaceutical manufacturers. Insurance companies may vary by industry – medical and long term insurance providers will be classified as medical healthcare. (Included on hhs.gov list).

Covered entities are defined in the HIPAA rules as (1) health plans, (2) health care clearinghouses, and (3) health care providers who electronically transmit any health information in connection with transactions for which HHS has adopted standards. A "business associate" is a person or entity that performs certain functions or activities that involve the use or disclosure of protected health information on behalf of, or provides services to, a covered entity.

Government/Military: Any city, county, state, national or military entity; or a department within one of these entities. In the event that a medical facility is also a government or military entity, it will be listed under Government/Military. Entities such as Veteran Association Medical Centers (VAMC) will be included in this sector.

Banking/Credit/Financial: This sector includes entities such as banks, credit unions, credit card companies, mortgage and loan brokers, financial services, investment firms and trust companies, payday lenders and pension funds (401 savings plans)

2014 Data Breach Category Summary

2014 Breaches Identified by the ITRC as of:	1/5/2015
--	-----------------

Total Breaches:	783
Records Exposed:	85,611,528

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2014 Breach List", or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at this time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

The ITRC would like to thank IDentityTheft911 for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.

1/5/2015

Total Breaches: 783

Records Exposed: 85,611,528

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2014 Breach List"), or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at this time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

What is a breach? A breach is defined as an event in which an individual's name plus Social Security Number (SSN), driver's license number, medical record, or a financial record/credit/debit card is potentially put at risk – either in electronic or paper format.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

The ITRC would like to thank IDentityTheft911 for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.

ITRC20141222-04	Northwestern Memorial Healthcare	IL	12/19/2014	Electronic	Medical/Healthcare	Yes - Published #	2,800

Northwestern Lake Forest Hospital, Northwestern Memorial Hospital, and Northwestern Medical Group, affiliates of Northwestern Memorial HealthCare (collectively NMHC"), are committed to protecting the confidentiality and security of our patients' information. Regrettably, this notice concerns an incident involving some of that information. On October 21, 2014, we learned that a password protected, unencrypted laptop containing patient information was inside an employee's vehicle that was stolen on that same date. The employee immediately contacted law enforcement who began an investigation.

On September 24, 2014, a laptop computer and cell phone were stolen from a BWH physician during an armed robbery that took place off of BWH premises. During the robbery, the assailants forced the victim to disclose the pass codes/encryption keys to these devices. Possession of the pass codes/encryption keys along with the devices themselves could provide an individual the ability to view information stored on the laptop or cell phone. The theft was immediately reported to the Boston Police Department. We do not know if the information on these devices has been accessed. To date, neither the laptop nor the cell phone has been recovered.

In early April, 2014, during an audit of our billing data base, Athena, we identified suspicious access that prompted an investigation. Our investigation revealed that a user ID and password assigned to a former employee had been used to access information in the Athena system between April, 2013 and March, 2014. Our investigation determined that the information accessed with the user ID and password for the majority of patients included their name, date of birth and the last four digits of their Social Security number. A small group of patients had additional information accessed which included their name, dates and times of service, provider and facility names, patient account numbers (which may have included Social Security numbers), date of birth, and treatment information, such as diagnosis.

ITRC20141110-02	Palm Springs Federal Credit Union	CA	10/30/2014	Electronic	Banking/Credit/Financial	Yes - Unknown #	Unknown

As you know, your credit union, Palm Springs Federal Credit Union, strives to protect your personally identifiable information so that it is never released outside of the credit union. We are writing to you with important information about a recent loss of data. Financial institutions are required to have their operations and records audited regularly. As part of the audit process, the Credit Union provided information regarding the Credit Union's members on an external drive containing members' names, addresses, social security numbers and account numbers. Regrettably, the drive was lost and its location is now unknown

ITRC20141107-01	Home Depot - Emails	GA	11/7/2014	Electronic	Business	Yes - Unknown #	Unknown
As if the credit card breach at Home Depot didn't already look enough like the Target breach: Home Depot said yesterday that the hackers who stole 56 million customer credit and debit card accounts also made off with 53 million customer email addresses. In an update (PDF) released to its site on Thursday, Home Depot warned customers about the potential for thieves to use the email addresses in phishing attacks (think a Home Depot "survey" that offers a gift card for the first 10,000 people who open the booby-trapped attachment, for example). Home Depot stressed that the files containing the stolen email addresses did not contain passwords, payment card information or other sensitive personal information.

ITRC20141103-05	VA Montana Health Care System	MT	10/30/2014	Paper Data	Government/Military	Yes - Unknown #	Unknown

A healthcare data breach possibly occurred in Montana when PHI was mailed to the wrong individual. The VA Montana Health Care System is facing a potential health data breach after a veteran's PHI was accidentally mailed to the wrong person. U.S. Army, Air Force and National Guard veteran Kip Braden told The Billings Gazette that he was expecting authorization from the VA for outpatient services. However, when the mail arrived, the paperwork included a different veteran's name, address, date of birth, Social Security information and his medical condition.

ITRC20141020-11	Marquette University	WI	10/16/2014	Electronic	Educational	Yes - Unknown #	Unknown

Marquette University has suffered a potential data breach because of a technical glitch that allowed anyone with Marquette login credentials access to personal information on people's graduate school applications kept on an internal server. The accessible information includes Social Security numbers, dates of birth, addresses, test scores and financial information, Marquette University officials said in a statement Thursday.

ITRC20141020-05	City of Dallas / Dallas Fire-Rescue	TX	10/15/2014	Electronic	Government/Military	Yes - Published #	1,000

A small number of Dallas Fire-Rescue (DFR) Emergency Medical Services (EMS) laptop computers in DFR ambulances became unaccounted for between January 1, 2011 and August 29, 2014. During that time period, you were treated by Dallas Fire-Rescue paramedics and some of your protected health information was collected onto an EMS laptop. On August 15, 2014, the City determined that one of the software applications on these EMS laptops was not properly protected. If the EMS laptop used during your treatment was one of those unaccounted for, and if the paramedics performed an electrocardiogram (EKG) on you, that EKG and possibly your name, age and gender, may have become accessible to one or more persons not entitled to that information.

Penn Highlands Brookville, a high quality healthcare service for the Brookville area, today confirmed a data security incident which may involve personal information for patients of Barry J. Snyder, MD. On August 14, 2014, Penn Highlands Brookville discovered that a computer server containing patient information for Dr. Snyder was compromised when a third party intruder potentially had access to information contained on the server. Dr. Snyder's office, located in Fairmount City, did not experience the data security event directly, but rather a third party vendor located in Ohio hired to maintain records for Dr. Snyder may have been compromised. The types of information affected may include a patient's name, address, date of birth, driver's license number, Social Security number, phone number, insurance information, medical information, and gender.

ITRC20141007-03	Touchstone Medical Imaging, LLC	TN	9/5/2014	Electronic	Medical/Healthcare	Yes - Published #	307,528

Touchstone Medical Imaging, LLC is committed to protecting the security and confidentiality of our patients' information. Regrettably, we are writing to inform you of an incident involving some of that information. On May 9, 2014, we became aware that a seldom-used folder containing patient billing information relating to dates prior to August 2012 had inadvertently been left accessible via the internet. Upon learning this, we immediately secured the folder and removed it from public view. We also began an internal investigation which initially led us to believe that the patient information in the folder was not readable. However, on September 5, 2014, we obtained new information that suggested that the patient information may have been readable and included your name, date of birth, address, telephone number, Social Security number, health insurer name, radiology procedure and diagnosis.

ITRC20141007-02	UIL Holdings Corporation	CT	9/30/2014	Electronic	Business	Yes - Unknown #	Unknown

We are writing to inform you of an incident that involved your personal information. On or about September 13, 2014, a thief stole a laptop computer containing your personal information from a professional services firm performing work for UIL Holdings Corporation ("UIL"). The theft was reported to the police, but the police have not been able to locate or recover the laptop. The vendor first informed UIL about the theft on September 18, 2014. Upon learning of the theft, UIL immediately launched an investigation.

Hartford-based CareCentrix, Inc. is a home care network that contracts with health plans to provide home care services for their insured members. In that context, CareCentrix has access to personal and protected health information of those to whom they provide services. On August 11, law enforcement contacted CareCentrix and informed them that a former employee had been arrested on July 18, and at that time, had been found in possession of PHI of certain individuals. The employee had last worked for CareCentrix on July 10. Not all of the PHI found in the former employee's possession related to CareCentrix patients, but some of it did, and such information may have included names, dates of birth, social security numbers, health plan insurance numbers, and/or types of home care services, equipment, or supplies.

On or about July 24, 2014, Owensboro Medical Practice, PLLC, and its business associate, Research Integrity, LLC, learned that a spreadsheet containing protected health information was wrongfully copied and removed from the offices of Research Integrity by a former employee. This occurred despite the fact that only properly authorized persons at Research Integrity had access to the spreadsheet. The type of information contained on the database included patient names, addresses, telephone numbers, dates of birth, Social Security numbers and health condition(s). The spreadsheet had information of less than only 10% of the total number of Owensboro Medical Practice patients.

ITRC20140930-09	Texas Wellness Incentives and Navigation (WIN) Project	TX	9/29/2014	Electronic	Medical/Healthcare	Yes - Unknown #	Unknown

The University of Florida and the Texas Health and Human Services Commission (HHSC) are partners for the Texas Wellness Incentives and Navigation (WIN) Project for Medicaid patients. In a newly disclosed breach, the University of Florida, acting as a partner of the HHSC, sent letters to Houston area physicians requesting health records for WIN project enrollees. Due to a reported mail merge error, however, some University inquiries were mistakenly sent to the wrong physician. UF reports that the only information shared with the incorrect physician was the patient's name, Medicaid STAR+PLUS identification number, and date of birth.

ITRC20140923-02	Cook County Health and Hospital Systems	IL	9/22/2014	Electronic	Medical/Healthcare	Yes - Published #	767
As part of a collaborative public health project, an individual working on behalf of CCHHS sent an e-mail to an authorized individual at a non-Cook County healthcare organization in July 2014.							

The transmitted information contained protected health information that was not encrypted. Encryption is a process that converts the information into a format that cannot be easily understood by unauthorized people. This was identified immediately after the e-mail was sent. The receiving organization deleted the e-mail without reviewing the contents. There has been no indication of unauthorized use of the information and CCHHS officials have notified affected individuals. The information contained patient names, date of birth, race, ethnicity, gender, zip code, medical record number, date of service, place of service, type of lab test performed and lab test results. The information DID NOT contain patient addresses or social security numbers.

Diatherix reports that on July 10, it discovered that Diamond Computing Company, a contractor providing it with billing-related services, had a security lapse that made one of its servers accessible via the Internet. The server became exposed on Sept. 24, 2011, Diatherix says. It was first accessed without authorization on Oct. 16, 2011, though no PHI was viewed at that time. Diatherix's investigation indicates that documents containing PHI were first inappropriately viewed on March 7, 2014. Diamond Computing Company terminated access to the server on July 10.

ITRC20140922-05	Brandon Hall School	GA	9/17/2014	Paper Data	Educational	Yes - Unknown #	Unknown

A Henry County woman is outraged after she purchased a used filing cabinet and found students' personal information inside.

The files had the Brandon Hall School logo and so much more. Elizabeth Darsey found them in a used filing cabinet she purchased at a used furniture warehouse.

"Disciplinary actions, legal actions, lawsuits, employment issues, everything," Darsey told Channel 2's Kerry Kavanaugh. Brandon Hall is a private school in Sandy Springs. The files date back to the 2003-2004 school year and include information about students and staff. Kavanaugh found copies of personal checks from school donors, expulsion letters, even information from someone's job application. "It includes his family name, his given name, his country of origin, his Social Security number," Darsey said. "I think they need to contact every parent and student that is included in this to let them know."

Central Utah Clinic – More than 31,000 patients at Central Utah Clinic may have had their personal information accessed in a data breach. While the hospital says it successfully defends against many cyber attackers every month, the hospital's IT professionals discovered on June 9 that an attacker had compromised one of the hospital's servers that contained radiology reporters dating back from 2010. The server also contained some names, dates of birth, Social Security numbers, addresses and phone numbers. There is no evidence that information was viewed or copied during the breach. "These attacks are an unfortunate aspect of information technology and modern healthcare is not immune from this," said Central Utah Clinic CEO Scott Barlow.

ITRC20140902-12	Beachwood-Lakewood Plastic Surgery (Office of	OH	8/29/2014	Electronic	Medical/Healthcare	Yes - Published #	6,141

We take our patients' privacy seriously, and it is important to us that you are made aware of a potential issue. On June 29, 2014, several offices in the Parkway Medical complex (3609 and 3619 Park East Drive) were burglarized, including Beachwood Plastic Surgery. Approximately 20 Beachwood businesses have been burglarized in the last few months. Computer hardware that stored personal information of some of our patients was stolen during the burglary in our office. This information included names and limited medical information, but did not include personal information such as addresses or phone numbers.

ITRC20140902-10	Metro Public Health Department / Children	TN	8/29/2014	Paper Data	Medical/Healthcare	Yes - Published #	1,717

On July 24, 2014, the Health Department discovered that index cards maintained by the CSS were missing. These index cards contained information including CSS patients' names, addresses, social security numbers, birth dates, and medical coding numbers. The Health Department immediately began an internal investigation, including taking steps to locate the misplaced index cards. Based on this investigation, the Health Department has no reason to believe that the information on the index cards was taken or used by unauthorized individuals and determined that the index cards were probably placed in a landfill. Health officials also determined that only CSS patient information was lost. No other Health Department client information was impacted.

The purpose of this letter is to inform you of a recent incident that may affect the security of your personal and protected health information. We are providing this notice to ensure that you are aware of the incident, so that you may take steps to protect your information should you feel it is appropriate to do so. On June 30, 2014, the Arcadia Police Department informed us that it was investigating a former AltaMed employee on suspicion of identity theft. During their investigation, law enforcement stated it had recovered a hard drive and other evidence containing the personal information of individuals. They believed the information recovered had been used by individual(s) to commit or attempt to commit identity theft or fraud. However, citing its ongoing investigation, law enforcement would not disclose whether those records were AltaMed records, the identities of the individuals to whom the information related, or the reason for its belief that the information had been misused.

On Tuesday, the University of Louisiana at Monroe experienced a data security breach when a ULM employee's email account was accessed by an unauthorized individual. This security breach may have compromised the personal information of students who graduated from ULM in Fall 2013, and Spring 2014. Data security measures have been reinforced with the ULM Foundation staff. In addition, ULM is strengthening data security measures.

ITRC20140812-18	Office of Alexander J. Tikhtman, MD	KY	7/9/2014	Electronic	Medical/Healthcare	Yes - Published #	2,376

The covered entity (CE), offices of Alexander J. Tikhtman, M.D., lost an unencrypted flash drive containing the electronic protected health information (ePHI) of 2,376 individuals. The flash drive was not recovered. The ePHI included patient's names, treatment and diagnostic information, and in some instances, dates of birth and social security numbers. The CE provided breach notification to the affected individuals, HHS, and the media. It also established a dedicated call center for questions related to the breach and offered free credit monitoring and identity theft services to individuals whose social security numbers were breached. The CE updated its privacy and security policies and procedures relating to the use, storage, and transmission of PHI. OCR obtained assurances that the CE completed the corrective action listed above.

It's an identity thief's paradise – the payroll department of a thriving local business. Not only do Human Resources records contain names, ages and Social Security numbers (SSN), they also often contain direct deposit information for the banks that workers use. So you'd think that a company would be extremely careful when new staffers are hired who may access those files. Yet employees at San Mateo Medical Center (SMMC) in California have learned that it's easy for criminals to slip through the cracks and the result is a bump in identity theft risk.

Apparently, login credentials of an inactive (Axiom) employee were never properly terminated as there was access to the database between April 2009 and March 2010. AMR did not know about it, however, until Axiom Insight first contacted them on August 31, 2011 to alert them. All told, 944 people had their files accessed. The files contained their names, addresses, phone numbers, and Social Security numbers.

ITRC20140728-02	Self Regional Healthcare	SC	7/25/2014	Electronic	Medical/Healthcare	Yes - Published #	38,906

On May 27, 2014, Self Regional employees discovered that two unauthorized individuals broke into one of its facilities and stole a laptop belonging to SRH. The theft occurred on Sunday, May 25, 2014. Upon learning of the burglary, SRH contacted law enforcement and worked closely with them. Both intruders have been arrested. The thief responsible for stealing the laptop confessed to the crime and stated that he destroyed and disposed of the laptop in a lake. The police sent divers in the water, but SRH and police have been unable to recover the stolen laptop to date.

ITRC20140708-01	Department of Managed Health Care (DMHC) / Blue	CA	7/8/2014	Electronic	Government/Military	Yes - Published #	18,000

On May 16, 2014, the DMHC discovered that Blue Shield of California had inadvertently included provider Social Security numbers (SSNs) in the rosters Blue Shield provided to the DMHC in February, March and April, 2013. Because they did not recognize their error, Blue Shield did not mark the rosters as confidential or otherwise alert the DMHC to the inclusion of the SSNs. The DMHC's subsequent investigation revealed that the DMHC had produced the rosters in response to ten PRA requests made to the DMHC between March 2013 and April 2014. In addition to the SSNs, the rosters included providers' names, business addresses, business telephone numbers, medical groups, and practice areas.

ITRC20140620-01	Rady's Children Hospital #2	CA	6/19/2014	Electronic	Medical/Healthcare	Yes - Published #	6,307

The internal investigation of the initial breach included a review of other areas of the hospital that used a "training file" for testing competency, according to the hospital. The review discovered that in August, November and December 2012, an employee e-mailed a training exercise with patient information to three job candidates. Another six applicants came to the campus to take the test on Rady's computer, but had no ability to save, store or transmit data. This file contained information on 6,307 patients, but also had no Social Security or financial data. "We are making every effort to contact the three recipients of the email to confirm that the email and file have been destroyed," according to the hospital statement

Riverside Community College District (RCCD) is committed to maintaining the privacy and security of our students' personal information. If an incident occurs that potentially exposes some of that information, it is our duty to communicate directly with those affected. On Monday, June 2, 2014, RCCD learned that an email containing student records was sent to an incorrect external e-mail address the previous Friday, May 30. We immediately began an investigation and determined that the e-mail contained information about RCCD students enrolled in spring 2014 semester classes. The data file contained your name, home address, preferred phone number, student e-mail address, birth date, student identification number, enrolled classes, and Social Security number.

ITRC20140616-07	Herbaria	MO	6/6/2014	Electronic	Business	Yes - Unknown #	Unknown

I am writing as the attorney for Herbaria, an all natural soap company based out of St. Louis, Missouri. I want to make you aware that my client has recently learned that the system it used to process credit card and debit card transactions for certain purchases made through its website was compromised, which may have resulted in a compromise to credit card or debit card of certain of your State's residents. We believe the date of such compromise started on or after May 1, 2014 and ended on May 16, 2014, when Herbaria became aware of it. We believe that two residents of your State may have been affected by this breach.

Monsanto Co. (MON)'s data security was breached at its Precision Planting unit, exposing employees and customers to potential misuse of credit card information and tax identification numbers. Fewer than 1,300 farmer customers were affected by the breach, Christy Toedebusch, a spokeswoman for the St. Louis-based company, said in an e-mail yesterday. Monsanto discovered on March 27 that an outside party had accessed Precision Planting servers, the company said in a May 14 letter to the Office of the Attorney General in Maryland, where 14 state residents may have been affected.

ITRC20140527-09	Precision Planting	IL	5/14/2014	Electronic	Business	Yes - Unknown #	Unknown

Precision Planting LLC, a wholly owned subsidiary of Monsanto, provides farm equipment and services to agricultural customers. To provide these services, we collect business-related information about the companies we serve along with some personal information pertaining to individual business owners, employees and contractors. On March 27 we discovered unauthorized access to our systems had occurred by an outside party. Files on the affected servers contained personal information, including customer names, addresses, tax identification numbers (which in some cases could be Social Security Numbers), and (in some cases) financial account information.

ITRC20140422-04	McBroom Clinic	TX	3/14/2014	Electronic	Medical/Healthcare	Yes - Published #	2,260

An incident has occurred that may involve your personal information. In early January 2014, the McBroom Clinic asked a company to help us with a practice audit. We gave this vendor access to limited patient information in accordance with HIPAA and Texas requirements. This information included insurance coverage and payment data, some of which was sent to the vendor on a portable USB flash drive. The vendor received the information on January 9, 2014, but did not see the USB flash drive in the package and discarded it with the packaging in line with their disposal procedures. We learned of this inadvertent disposal on January 17, 2014, when the vendor asked for another copy of our information. When we asked, the vendor said they had not seen or accessed the USB flash drive.

ITRC20140404-01	Department of Community Health	MI	4/3/2014	Electronic	Government/Military	Yes - Published #	2,595

The Michigan Department of Community Health has issued a notice of a security breach in protected health information kept on a laptop computer and flash drive of an employee of the state's long Term Care Ombudsman's office. The MDCH is now in the process of notifying 2,595 individuals and the Department of Health and Human Services regarding the breach of the records protected under the Health Insurance Portability and Accountability Act. The laptop and flash drive were stolen on the evening of Jan. 30 or early morning Jan. 31, Information on the laptop was encrypted. However, data on the flash drive was not and contained sensitive personal information about people served by the ombudsman, both living and deceased, including names and addresses, and for some individuals, dates of birth.

ITRC20140321-30	Internal Revenue Service	DC	3/18/2014	Electronic	Government/Military	Yes - Published #	20,000

An Internal Revenue Service employee took home personal information on about 20,000 IRS workers, former workers and contractors, putting the data at risk for public release, the agency said Tuesday. The employee took home a computer thumb drive containing names, Social Security numbers and addresses of the workers, and plugged the drive into an unsecure home network, IRS Commissioner John Koskinen said in an email to employees.

ITRC20140321-29	Auburn University College of Business	AL	3/20/2014	Electronic	Educational	Yes - Published #	13,698

On November 20, 2013, Auburn University became aware of a compromised server within the College of Business network. Auburn immediately patched the vulnerability and launched an internal investigation to determine the scope of the attack. When it became clear that this incident could result in the unauthorized access to personal information, Auburn University hired an independent, third-party computer forensics expert to assist in identifying the full extent of data potentially exposed as a result of this incident.

Most people would enjoy getting a \$7,000 check in the mail. In the case of one West Seattle man, all the check indicated was his identity had been stolen.

"The check had my Social Security Number on it as well as another woman's name," he said, asking us not to release his name. "I immediately became suspicious." The check arrived two weeks ago and claimed to be a tax refund. This despite the fact the man already knows he's not getting one, in fact he owes the federal government money.

ITRC20140218-01	Blue Shield of California	CA	1/15/2014	Electronic	Medical/Healthcare	Yes - Unknown #	Unknown

Blue Shield of California is notifying some agents that their Tax Identification Numbers – which are often the agents' Social Security Numbers – were accidentally disclosed to some of the agents' clients who attempted to pay their bills online.

In a letter dated today, BSC writes that the problem with SSN exposure existed between December 20, 2013 and January 16, 2014, but that the SSN were not presented in a format that would make the number immediately recognizable as a Social Security number. Nor, writes, BSC, do they have indication of misuse of the agents' names and SSN.

ITRC20140204-01	Bring It To Me, LLC	CA	1/28/2014	Electronic	Business	Yes - Unknown #	Unknown

We value your business and respect the privacy of your information, which is why, as a precautionary measure, we are writing to let you know about a data security incident that may involve your personal or payment card information. Our online ordering software provider, Big Tree Solutions, recently informed us that they identified unauthorized modifications in their software that could potentially allow new payment credit card information entered between October 14, 2013 and January 13, 2014 to have been obtained by an unauthorized user.

ITRC20140127-08	Apex Systems	VA	1/14/2014	Electronic	Business	Yes - Unknown #	Unknown

On December 1, 2014 an Apex employee sent an email that mistakenly contained an internal company spreadsheet with the personal information of certain other Apex employees. Upon learning of this error on December 24, 2013, Apex immediately commenced an internal investigation to determine the scope of this incident and retained specialized data security counsel to guide the company through its response. Although these investigations are ongoing, it has been determined that the spreadsheet contained employee names, Social Security numbers and salary information.

ITRC20140127-04	PCC Structural Inc.	OR	1/24/2014	Electronic	Business	Yes - Unknown #	Unknown

Sometime between Dec. 30 and Jan. 10, an unidentified person left documents in a Portland-area restaurant that included confidential information about PCC Structural Inc. employees. The security breach was low-tech, unlike the recent data disaster at Target Corp., in which hackers stole credit-card and other personal information for as many as 110 million customers. But in some ways, though it involved far fewer people, the PCC breach was more serious because the documents contained employees' names and social security numbers – the all-important digits that are like gold in the hands of identity thieves.

According to court documents, from approximately February 2009 to February 2011, Brame was employed as a social worker at the Alamance County Department of Social Services (Alamance DSS) in North Carolina. Brame was responsible for investigating claims of abuse and neglect against minors and disabled adults. As part of her official duties, Brame had authorized access to extensive identifying information – including names, dates of birth and Social Security numbers – of Alamance DSS clients, including abuse victims and recipients of various state benefits, and of witnesses in official investigations.

Navy veteran Sylvester Woodland said he couldn't believe what he was seeing Wednesday night when he logged onto the Veteran Affairs' E-Benefits website.
"It gave me a different person's name, each and every time I came back," Woodland said. At first I thought it was just a glitch, but the more I thought about it, I said, wait a minute, this is more than a glitch, this is a breach." Woodland was on the VA's E-Benefits website trying to track down his own history for a bank loan. Instead, windows kept popping up displaying other veterans' medical and financial information.

ITRC20140121-07	United Natural Foods	CA	1/8/2014	Electronic	Business	Yes - Unknown #	Unknown

In early October, 2013, UNFI was notified by local police in Auburn, California, of two separate incidents in which several old/retired UNFI laptops were recovered by police during the arrest of two homeless individuals. Upon receiving notification from Auburn police, UNFI discovered that the source of the laptops appeared to be a UNFI-owned warehouse in Auburn, the security of which was breached sometime between September 3, 2013 and October 3, 2013. Inspection of the remaining contents of the warehouse revealed that additional laptops and hard drives in storage there, as well as certain paper payroll files, may have been compromised

2014 Breaches Identified by the ITRC as of:

1/5/2015

Total Breaches: 783

Records Exposed: 85,611,528

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2014 Breach List"), or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included if the ITRC is not certain that the source is real and credible. We include, for each incident, a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at the time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

What is a breach? A breach is defined as an event in which an individual's name plus Social Security Number (SSN), driver's license number, medical record, or a financial record/credit/debit card is potentially put at risk – either in electronic or paper format.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

The ITRC would like to thank IDentityTheft911 for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.
